BEMNET KIBRET

FOUNDING FULL-STACK & AI ENGINEER

+251 929 177 999 | Addis Ababa, Ethiopia (UTC+3 | Open to Remote) | bemnetkibret4@gmail.com | Portfolio | GitHub | LinkedIn

PROFESSIONAL SUMMARY

Founding full-stack and applied AI engineer who takes AI-native products from zero to production. Built Senselet, a retail inventory and ERP platform, alone end to end: a 33-tool Gemini agent with model failover, multi-tenant PostgreSQL with row-level security on every table, and an offline-first sync layer stress-tested against network failure. Works across TypeScript, React, Next.js, Node.js, Supabase and PostgreSQL, owning everything from schema design to deployment and tests.

EXPERIENCE

Founder & Lead Engineer | Senselet Technologies [senselet.store] December 2025 – Present

- **Zero-to-Production Platform:** Designed and built Senselet solo: an AI-native inventory and ERP platform for retail, live in production (pre-revenue), with a React/TypeScript frontend and a Supabase backend of 21 TypeScript edge functions.
- **Agentic AI:** Built a 33-tool Gemini function-calling agent that adjusts stock, transfers between branches, proposes purchase orders from sales velocity and reconciles invoices, with cascading failover across Gemini models and OpenRouter.
- **Multi-Tenant Data Security:** Modeled a 28-table PostgreSQL schema through 160 migrations, with row-level security on every table (131 policies) isolating each organization's data and masking costs from clerk roles.
- **Offline-First Reliability:** Built a client mutation queue with idempotency keys, exponential backoff and a dead-letter queue; stress-tested 2,500 operations on a simulated failing network with 0 lost writes, and fixed a duplicate-write edge case the test exposed.
- **Testing & Quality:** Covered ~81k lines of TypeScript with 266 automated Vitest tests, including a 120-item barcode classification suite (GTIN, GS1 and store-issued codes).

Backend Developer (Contract) | Marvels Creative Technology [LinkedIn] March 2025 – June 2025

- **API Development:** Built RESTful API endpoints in TypeScript and Next.js for client applications, containerized with Docker.
- **Database Design:** Designed PostgreSQL schemas and query workflows with Prisma ORM, enforcing strict data contracts and foreign-key integrity.
- **Testing:** Wrote automated API test suites with Jest and Postman, run in GitHub Actions CI.

KEY PROJECTS

Igniyte Autonomous Lead Enrichment Pipeline TypeScript, Node.js, Fastify, Playwright, Gemini, Render

- **Autonomous Media Triage & Qualification:** Engineered an automated adverse-media monitoring pipeline using the Gemini Flash API and agency rule matrices to qualify B2B reputation risks across a pool of 1,290+ enterprises.
- **Headless Browser Injection & SSO:** Built a Playwright auto-injector with persistent Microsoft Entra OAuth session handling to triage and submit 20+ daily approved leads directly into the Azure sales portal, eliminating manual review.
- **Microservice Architecture & Enrichment:** Deployed a production Fastify REST microservice on Render integrating the RocketReach v2 API with credit safety floors, concurrency throttling, and permanent deduplication caching.

Cyborg Job Pipeline (open source) [GitHub Repo] TypeScript, Node.js, Gemini, Telegram Bot API, Docker

- **Autonomous Sourcing:** TypeScript/Node.js pipeline that sources remote engineering roles, identifies the decision-maker via RocketReach and drafts a tailored pitch with Gemini.
- **Human-in-the-Loop Dispatch:** Telegram bot with inline actions: nothing sends until approved; emails go out via Gmail with the role-matched resume attached.
- **Open Source & Hardening:** Open-sourced under MIT after hardening: owner-only bot access, required shared secrets, profile-driven config, Vitest tests and GitHub Actions CI; deployed on Render with Docker.

TECHNICAL SKILLS

Languages & Core:	TypeScript, Python, JavaScript (ES6+), SQL, HTML5, CSS3
Frontend & UI:	React, Next.js, Tailwind CSS, Framer Motion, React Query
Backend & AI Systems:	Node.js, Supabase Edge Functions (Deno), Express, Fastify, LLM Agents, Function Calling, Gemini API, OpenRouter, Webhooks
Databases & Cloud:	PostgreSQL (RLS, migrations), Supabase, Prisma ORM, Docker, Render, AWS fundamentals (self-taught)
Tools & CI/CD:	Git, GitHub Actions, Vitest, Jest, Playwright, Postman

EDUCATION

Evangadi Tech | Certification, Full Stack Web Development July 2024 – March 2025 | Silver Spring, MD (Remote)

Addis Ababa Science & Tech. University | Engineering Coursework 2021 – 2023 | Addis Ababa, Ethiopia
