BEMNET KIBRET

FOUNDING FULL-STACK & AI ENGINEER

bemnetkibret4@gmail.com • +251 929 177 999 • Addis Ababa, Ethiopia • GitHub • LinkedIn

PROFESSIONAL SUMMARY

Founding Full-Stack & AI Engineer who takes data-heavy products from zero to production. I build PostgreSQL/Supabase backends, TypeScript and React frontends, and LLM agents with function calling and multi-model failover. Founder of Senselet, a multi-tenant inventory platform with a 33-tool AI agent, 160 Postgres migrations and row-level security on all 28 tables (131 policies), and author of open-source automation tools that keep a human in the loop.

EXPERIENCE

Founder & Lead Engineer | Senselet Technologies — Dec 2025 – Present

Product & Architecture: Built Senselet (senselet.store), a multi-tenant, multi-branch inventory platform on React (Vite), Supabase Postgres and 21 TypeScript edge functions, with HMAC-verified Chapa subscriptions and a Telegram bot.

Agentic AI: Engineered a 33-tool Gemini function-calling agent with role-scoped tool access (admin, manager, clerk) and cascading failover across Gemini models and OpenRouter, covering reorder triggers, purchase-order approval and invoice reconciliation.

Data Integrity: Modeled a 28-table schema through 160 migrations with row-level security on every table (131 policies). Built an offline mutation queue with idempotency keys, backoff and a dead-letter queue; a 2,500-operation test on a simulated failing network lost 0 writes, and the duplicate-write case it exposed now fails closed.

AI Features & Quality: Shipped receipt OCR, AI-assisted CSV column mapping and barcode/GTIN catalog lookup, backed by 266 automated Vitest tests; Telegram webhooks are processed exactly once via an insert-first claim on a unique index.

Independent Work: Built a lead qualification and enrichment service for a client (TypeScript, Fastify, Gemini, RocketReach, Lemlist) and open-sourced personal automation tools, using AI-assisted development throughout.

Backend Developer (Contract) | Marvels Creative Technology — March 2025 – June 2025

APIs: Built and optimized REST API endpoints and server-side routes in TypeScript and Next.js for client applications.

Databases: Designed PostgreSQL schemas and query workflows with Prisma, enforcing data contracts and foreign-key integrity.

Testing: Added automated API tests with Jest and Postman running in GitHub Actions CI.

Tech Stack: TypeScript, Next.js API Routes, PostgreSQL, Prisma ORM, Node.js, Jest, Docker.

KEY AI & INFRASTRUCTURE PROJECTS

AGY Telegram Bot – Mobile AI Agent Cockpit

What it does: Open-source Telegram bot and Mini App that drive a local Google Antigravity coding agent from a phone: plan-and-approve flow, git diffs and push, dev-server control, and a Cloudflare tunnel for previews.

Engineering: Playwright mobile (390×844) and desktop (1280×800) screenshots, automatic fallback to a second Gemini model on rate limits, an audit log of every prompt, and 18 automated tests; bot commands are restricted to an allowlisted Telegram user.

Tech: Python 3.12, python-telegram-bot, FastAPI, Google Antigravity SDK, Playwright, Cloudflare Tunnel.

Cyborg Job Pipeline – Human-in-the-Loop Sourcing & 1-Tap Outreach

What it does: Daily pipeline that sources roles from RemoteOK and LinkedIn (Playwright), finds the hiring manager or founder via RocketReach, and drafts a 3-sentence Gemini pitch matched to one of three role tracks; every email waits for approval in Telegram.

Engineering: Free-webmail and company-domain guards with optional NeverBounce/Verimail checks, an owner-only bot with secret-protected cloud sync, Gmail delivery with the track's PDF resume, Docker on Render, Vitest and GitHub Actions CI.

Tech: TypeScript, Node.js, Google Gemini, RocketReach API, Playwright, Telegram Bot API, Nodemailer, Docker.

CoachTrack ET – Pitch-Side Soccer Timesheet & Billing TMA

What it does: Zero-dependency Telegram Mini App for youth soccer coaches: a session timer that survives app restarts, decimal hours rounded to 0.01 hr (including across midnight), and 1-tap rain cancellations.

Engineering: Parent statements shared to Telegram chats, CSV timesheet export, Google Sheets logging through an Apps Script webhook, and a first-run onboarding wizard.

Tech: Vanilla JavaScript, Telegram Mini App SDK, Google Apps Script, localStorage.

Lead Qualification & Enrichment Pipeline

What it does: Client service that monitors a pool of about 1,290 companies, qualifies leads with Gemini plus a deterministic rules matrix, enriches contacts through RocketReach and routes them into Lemlist campaigns.

Engineering: Enrichment cache with a daily credit cap, Retry-After-aware backoff, campaign dedup and a domain firewall, a secret-gated REST API and a cron scheduler with catch-up runs.

Tech: TypeScript, Node.js, Fastify, Google Gemini, RocketReach API, Lemlist API, Playwright, node-cron.

TECHNICAL SKILLS

Languages & Core: TypeScript, JavaScript, Python, SQL, HTML, CSS

Frameworks & Libraries: React, Next.js, Vite, Node.js, Express, Fastify, FastAPI, React Native (Expo), Three.js / React Three Fiber, GSAP, Tailwind CSS

AI & Agentic Systems: LLM function calling, multi-model failover, structured JSON output, human-in-the-loop agents, Gemini, OpenRouter, MediaPipe pose estimation

Databases & Cloud: PostgreSQL, Supabase (RLS, Edge Functions, Realtime), Docker, Render, Vercel, Cloudflare Tunnel

Architecture & Workflows: Multi-tenant design, row-level security, Vitest, GitHub Actions CI, AI-assisted development

EDUCATION & CREDENTIALS

Evangadi Technologies — Full Stack Web Development (MERN) 2024 — 2025

Addis Ababa Science and Technology University — Science and Technology 2021 — 2023
